

*Eastern DataComm Assists Maywood Public Schools
in Enhancing Their District-Wide Communications and
Emergency Notification Systems*

Maywood Public Schools

The Challenge

Maywood Public Schools sought to implement updated emergency communications while streamlining collaboration between staff, teachers, and parents.

Telecommunications and Paging Systems in Need of an Update

The district endeavored to streamline communication by adding phones to classrooms and any areas that did not currently have them, making both paging and calling easier for staff.

A Desire for an Enhanced Emergency Notification Solution

The district also wanted to improve its emergency notification system to be even more effective in responding to urgent situations. They wanted a system that could notify the police and everyone on school grounds of an emergency promptly and the ability to allow teachers to put the school in lockdown from their classrooms.

An Eastern DataComm Success Story:

Maywood Public Schools

Schools: 2

Students: 956

Teachers: 76

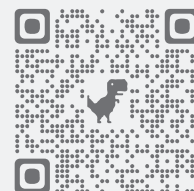

Sourcing the right-fit enhanced emergency communications system to provide an elevated level of safety, especially during urgent situations like lockdowns

Expanding the telecommunications solution to include telephony in every classroom

Executing 'total-coverage' communications so notifications reach all persons on school grounds
Creating the safest learning environment possible

“The representatives that we dealt with from Eastern DataComm were top-notch...The deployment couldn’t have been any smoother. There have been absolutely no hiccups whatsoever along the way. It was phenomenal, absolutely phenomenal.”

Michael Jordan, Superintendent of Maywood Public Schools

The Eastern DataComm Solution

When it came time to explore right-fit technology systems, Maywood Public Schools connected with Eastern DataComm. After a consultative and diagnostic collaboration, the Eastern DataComm team implemented solutions to address the district’s identified challenges.

A Comprehensive, Streamlined Approach to Calls and Paging

Eastern DataComm implemented a MiVoice Connect and E911 system for the district’s use so that calls within and beyond the school, as well as calls to 911, were most efficient. The system included the addition of new phones, which allowed for room-to-room calls, and paging that could be customized rather than their existing “page-all” option.

Integrating an Emergency Notification System with District-Wide Communications Solutions

Eastern DataComm provided the perfect mix of integrated solutions, pairing MiVoice Connect and E911 with Eastern DataComm’s Lockdown Emergency Notification System (LENS). LENS allows teachers and other key staff to place the school into lockdown at the push of a button. To ensure notification regardless of individual ability, the system also provides audio and visual cues for notification purposes while automating calls to first responders.

Solution at-a-Glance

E911 and LENS technology integrated, to offer a comprehensive emergency communications solution

Teachers can activate lockdown themselves from any classroom

Built-in intercom feature on the phones for an easy-to-use interface for every classroom

Comprehensive Lockdown and Emergency Notification System (LENS) for school and district-wide emergency communication

Simultaneous calls to 911 and police

Near-instantaneous lockdowns

New technology, efficiencies, and peace of mind delivered within a limited budget

Real-life use of emergency technology demonstrated its effectiveness and reliability
