

Commercial Access Control Solutions for Your School

From preventing unauthorized entry and trespassing to protecting sensitive student and staff information, the right access control system can do far more than simply restrict or permit entry. It can safeguard your school community's most valuable assets while helping your staff stay productive and confident.

Leverage this powerful technology to strengthen safety and security.

Access Control Solutions That Help Keep Your School Safe

Decide Who Can Enter and When

Access control allows you to decide who can move through your school buildings and grounds, where, and at what times. Setting access permissions ensures your system works the way you need it to every day—protecting students, staff, and visitors while supporting a safe learning environment.

Recognize and Respond to Threats

The flexibility to manage your access control system both on-site and remotely allows administrators and security personnel to identify, assess, and respond to threats in real time—keeping your school community protected 24/7/365.

Assure Legal Compliance and Student Privacy

Compliance with school safety mandates, emergency preparedness guidelines, and privacy regulations like FERPA is essential. Access control helps prevent unlawful entry, keeps sensitive records secure, and supports your district's legal responsibilities.

Integrate with Existing School Safety Systems

Your access control system can seamlessly integrate with other safety solutions, including video surveillance, emergency notification systems, paging systems, and environmental sensors. The result is a comprehensive safety and security ecosystem tailored to education.

Enjoy Peace of Mind

A well-designed access control system eliminates the worry of lost keys, improves operational efficiency by giving authorized staff the access they need, and provides peace of mind for students, parents, and educators.

Eastern DataComm's School Access Control Systems Offer

Swipe Card and Card Reader Technologies

Prevent entrance without a swipe card or key fob. Access can be customized to specific areas and times, enhancing campus security while reducing unauthorized access.

Request-to-Exit Systems

Choose motion detection (unlocking the door when movement is detected) or exit button technology (unlocking with the push of a button) for secure, controlled egress.

Door Strikes and Crash Bars

Door strikes can be set to allow entry or exit only with proper credentials. Crash bars can be integrated with your access control for safe emergency egress.

On-site, In-Person Training and Project Management and Implementation Support

From creating and programming access credentials to configuring the system and training your staff, Eastern DataComm provides complete support to ensure your school's access control is implemented effectively.

Harness the Power of Access Control for Your School
